## Product Description

### PRODUCT DESCRIPTION

#### Diamond Pattern Embossed Stainless Decorative Checkered Steel Plate

316L has a wide range of applications in the chemical industry because of its excellent corrosion resistance. 316L is also a derivative of 18-8 austenitic stainless steel, with 2 ~ 3% Mo element added.

On the basis of 316L, many kinds of steel are also derived. For example, 316Ti is derived after adding a small amount of Ti, 316N is derived after adding a small amount of N, and 317L is derived by increasing the content of Ni and Mo.

Most of the existing 316L in the market are produced according to American standards.

For cost consideration, steel mills generally put the Ni content of products as far as possible by the lower limit.
